Accelerate Your AI Strategy, Tailored to Your Business

Taking You From Idea's To Clear Next Steps

We're offering a comprehensive Generative AI Assessment to help your organisation explore and plan a custom AI strategy. Tailored to your industry and needs, this assessment will evaluate your current capabilities and provide a clear plan to speed up AI adoption. Our expert-led sessions will guide you through key steps, risks, and timelines, ensuring your AI journey is efficient and aligned with your business goals.

Our Assessment Includes:

Education

Introducing core AI concepts alongside an introduction to the full Microsoft Azure AI Solution stack.

Ideation

Identify and prioritise use cases based on the capabilities of technology today and in preparation for future developments.

Planning

A comprehensive adoption roadmap highlighting key dependencies from your current estate, risks and production timelines.

Our AI Assessment covers a range of technologies including: Microsoft Azure OpenAI, Chat GPT, DALL-E, GPT-4, GPT o1, Sora, Whisper & OpenSource.

Key Deliverables

- **AI Use Case Map -** Identifying and prioritising use cases based on implementation effort and business value, using a Boston matrix. This evaluation guides next steps; defining which use cases advance to a Proof of Concept, Pilots, or full-scale production project.

- **Dependency Plan -** Adds value by reviewing business use cases, risks, concerns, and key areas like responsible AI, security, and adoption. It helps clear up assumptions and outlines what's needed for successful implementation.

- **Adoption Roadmap -** Outlines actionable steps for prioritised use cases. Includes cost estimates, necessary skills, and resource requirements for tasks.

Assessment Overview

Stakeholder Interviews

Individual interviews are conducted with executive, department and technical owners to assess key drivers and ambitions for Generative AI Solutions.

AI Education Session

An informative session to provide up-to-date and relevant information. Introducing core AI concepts and product capabilities to 'inspire' the subsequent workshops.

Ideation Workshop

A forum to establish user personas, identify critical business use cases; prioritising them based on their impact, necessity and feasibility.

Planning Workshops

A deep-dive session into 2 or 3 use cases, focused on dependencies, risks, skills gaps and required products to build a well-integrated Generative AI platform.
