Power BI Health Check

Optimise Performance, Enhance Security and Boost Confidence in Your Power BI

Is your Power BI environment sprawling out of control? Is there a lack of confidence in the reporting platform? Do you spend more time resolving Power BI issues than building capability? Our Power BI Health check is designed to address these challenges.

As a specialist Microsoft Data & AI partner, we offer a comprehensive assessment of your current Power BI setup, providing expert guidance and actionable recommendations aligned with industry best practices. Our goal is to help you transform BI into a valuable asset that drives informed decision making across your organisation.
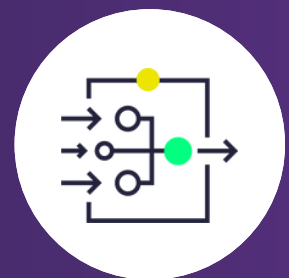

Key Outcomes:

Optimisation Roadmap

Receive a personalised strategy to enhance performance, improve security and streamline your Power BI environment.

Cost Benefit Analysis

Review your current licensing strategy and total cost, with recommendations for consolidation and optimisation.

Governance Framework

Support your internal Power BI team with a focus on governance, operational excellence and improved data culture.

Power BI Health Check

What's Included?

A full architecture review benchmarking your environment against industry standards including:

- Architecture
- Costs
- Security
- Access Controls
- Data Source Integration
- Data set and report duplication

An in-depth report and workshop with our consultants to discuss findings, recommendations and next steps.

Future-Proof Your Power BI, We'll help you:

Regain Control

Address deployment sprawl and reduce duplication between reports and data sets.

Enhance Performance

Optimise data modelling and resolve significant performance issues.

Improve Trust

Increase confidence in your platform and foster a stronger data culture.

Maximise your Investment

Reduce time spent managing issues and improve total cost of ownership.

Contact our team to schedule your Power BI Healthcheck and start your journey towards a high-performing, secure, and trusted business intelligence platform.
