

Thinking About Migrating your SQL Servers to Improve Database Management?

We'll Guide You Through Every Step.

Start your SQL Server migration with our expert guidance. Gain clarity on your current database environment and develop a strategic plan for the future. As SQL Server 2014 approaches end-of-life and cloud technologies continue to evolve, navigating the complex landscape of critical data workloads with a robust plan becomes essential.

Our SQL Server Migration Assessment is designed to arm you with all the information you need to migrate and modernise successfully.

Key Outcomes:

Discover and Assess

Use the latest Azure Migrate tools to explore your SQL environment. We'll assess the size, scale, and compatibility of each database to ensure it's ready for migration.

Plan for the Future

Build a clear roadmap of the SQL environment to Azure IaaS or PaaS SQL technology including application dependencies and right-size profiling for your needs.

Build a Business Case

Justify your migration project with clear Return On Investment values with detailed commercial analysis, effort estimates and timelines.

Our team will thoroughly assess your SQL Server environment, offering in-depth analysis of your current architecture, categorising and prioritising workloads, and devising a high-level migration strategy tailored to the most suitable Azure SQL technology.

SQL Migration Assessment

What's Included?

- **Full review of your current SQL Server estate:** Discover, assess and review the scale and compatibility of your SQL Server environment
- **Roadmap and migration plan** to migrate your SQL environment to Azure IaaS and PaaS services with Azure SQL DB and SQL Managed Instance. Identify and resolve any challenges and dependencies to migration with our expert guidance.
- **Commercial analysis for migration and investment:** Detailed report for cost optimisation, migration effort, Azure estimations including ROI calculations
- **Expert advice and guidance** from experienced Data Platform architects
- **Powered by Microsoft** Azure Migrate tooling and modern database technology

Future-Proof Your Data Platform estate with our SQL Server Migration Assessment:

Get AI Ready

Build a solid foundation for a well-managed, secure and scalable data estate in preparation for AI initiatives

Optimise Costs

Learn more on how to maximise your investment and save costs with in-depth commercial analysis for now and the future

Plan for a Scalable & Secure Platform

Develop a migration roadmap for new cloud services, using the highly available and secure Azure platform

Innovate & Modernise

Stay informed with best-practice guidance on the latest Azure SQL Database technology to modernise your data estate
